## **DETAILED ACTION**

### ***Claim Objections***

Claims 2 and 3 are objected to because of the following informalities: As written, claim 3 depends from itself, and also claim 2 depends from claim 3. For purposes of examination, these claims have been examined as if they depended from claim 1, which the Examiner suspects Applicant intended. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-17 and 19-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Saito et al.

As per claims 1-6, 12, and 19, Saito et al. discloses a method of masking vehicle noise by monitoring vehicle speed, setting a battery fan speed at a certain value at zero vehicle speed, and increasing a fan speed linearly/monotonically according to vehicle speed (dashed control duty value of Figure 8).

Art Unit: 3744

As per claims 7 and 21, Saito et al. discloses increasing fan speed according to cooling requirements regardless of vehicle speed (see Figure 8, solid control duty value line between t2 and t4).

As per claims 8, 9, 21, and 22, Saito et al. further discloses the fan speed control discussed above being a duty cycle, as illustrated in Figure 8 and discussed in the Abstract.

As per claims 10, 11, 13, and 14, Saito et al. discloses the vehicle being a hybrid electric vehicle (paragraph 0004).

As per claim 15, see discussion of similar claim 7, above.

As per claim 16 and 17, see discussions of similar claims 8 and 9, above.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Saito et al.

Art Unit: 3744

As per claim 18, Saito et al. does not disclose the specific temperatures and duty cycle values recited, however, official notice is taken that these are common temperature and duty cycle values that would have been obvious to one of ordinary skill in the art at the time of the invention as mere matters of design choice for the purpose of optimizing the efficiency of the system of Saito et al.
